

## Iteration 3 meeting 1 minutes (1st Nov)

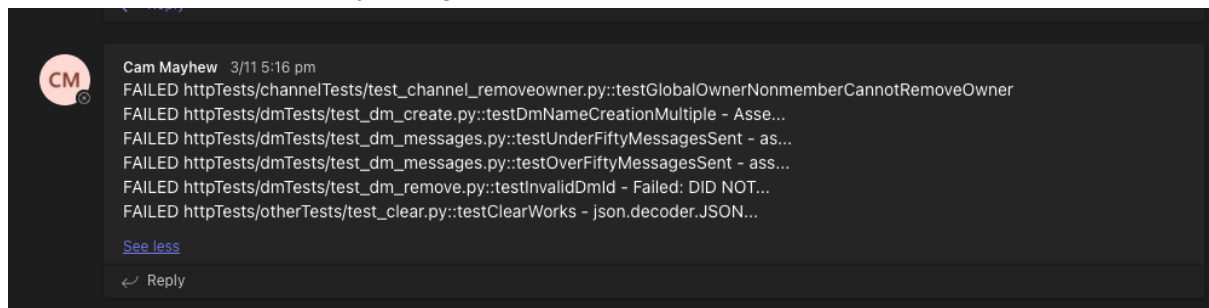

Discussed the iteration 3 specifications.

- We looked at the specification of iteration 3 and watched the video together and understood
- We also looked at our marks together for iteration 2 and discussed how we could do better in the next iteration
- Looking at the tests failing in iteration 2 we decided to make sure that we get those sorted and figure out what the issue could be.

## Iteration 2 improvements

Below are the failed tests that cam provided us with, which helped us get a good idea of what functions were actually failing.

After that we understood how to start early as a group and make sure we are on top of our things from the start

This was done by delegating iteration 3 into more mini tasks with deadlines

For example that same week, we made a task to update all our previous functions to be updated with the new spec of iteration 3.

This included updating the parameters (since the token is a header now)

As well as making the errors into HTTP throw errors.

1 November 2022

**DD** Daniel Duncan 1/11 9:38 pm

**To-do before our lab this Thursday**

- Everyone update the functions they did in iteration 2 to comply with the iteration 3 interface
  - Update parameters (*token is a header now*)
  - Make errors HTTP
- Abhe will update data.md - update existing functions with the new data structure in mind

### Meeting 2

13 November 2022

 **Meeting ended: 15m 11s**

↩ Reply

- Had a small meeting about who is going to be doing what types of functions and understood what each function will be doing.
- This allowed us to really understand which function would suit the best with each person's strength.
- Although this meeting was small this allowed us to understand iteration 3 properly and make sure that we finish on time.
- We also created issue boards in order to keep everything in order.

The list below shows all the new functions and their allocation among the group members

3 November 2022

**DD** Daniel Duncan 3/11 4:22 pm

I'll do message/react/v1, message/unreact/v1, message/pin/v1, and message/unpin/v1

▼ Collapse all

**RC** Reuben Cuasay 3/11 4:35 pm

I'll do the three standup routes

**AT** Abhedhya Thapa 3/11 4:36 pm

notifications/get/v1, search/v1, message/share/v1, user/profile/uploadphoto/v1

**LK** Lakshaya Kaushik 3/11 4:36 pm

user/stats/v1, users/stats/v1, admin/user/remove/v1, admin/userpermission/change/v1

**DF** Daniel Field 3/11 4:36 pm

message/sendlater/v1, message/sendlaterdm/v1, auth/passwordreset/request/v1, auth/passwordreset/reset/v1

## Iteration 3 Stand up (15th Nov)

**AT** Tuesday 9:51 pm  
done notifications/get, search/v1, message/share functions, changed the structure of the user interfaces to contain necessary keys such as the notification object for each user. Hoping to get 100% coverage for my functions by tomorrow

▼ Collapse all

**LK** Tuesday 9:55 pm Edited  
done user/stats/v1, users/stats/v1, admin/user/remove/v1, admin/userpermission/change/v1 functions and changed the structure of the user, channel interface adding the invites as well on the channels and dms for the timestamp. Also did tests for all the functions and made an MR

**DF** Tuesday 9:58 pm  
finished the password reset routes and the send later routes. Need to get the coverage up for the password reset functions and comment the functions.

**DD** Tuesday 10:07 pm  
Currently down with COVID... thankfully I'm done with my original functions, so I'm troubleshooting async error handling for user/profile/uploadphoto/v1 and drafting some questions for requirements elicitation

**RC** Yesterday 9:20 pm  
Finished all standup routes, one error with sharing a standup message in frontend. Working towards fixing that now

- Talked about the survey and assigned the survey completion to two people to make sure that is done efficiently

## Errors fixed from wednesday Leaderboards

- UserStats and UsersStats had a few errors with the return type so fixed those on call while using the front end and understanding where the code is going wrong
- UserStats and UsersStats also required the changing of many other functions such as channelCreate, channelJoin, channelInvite and some Dm functions
- As well as changing the interfaces for a lot of these functions in order to retrieve the timeStamps for when these functions are called and run.

This was done on call since this required a lot of teamwork and approval from everyone with their functions.
